

FINAL LAUNCH CHECKLIST

Samosa Sheet Website Production Launch Handbook

A step-by-step document for finishing, testing, deploying and maintaining the website safely.

Business contact currently configured

Phone and WhatsApp: +91 90803 33944

Public email: thechennaisamosa@gmail.com

Notification inbox: samosasheet@gmail.com

Address: No. 88, 7th Street, Azhagammal Nagar, Nerkundram, Chennai – 600107

Prepared: 5 September 2026

Project: /home/dell/SS/samosa-sheet-website

Keep this document with the project. Do not write API keys, passwords or recovery codes in this PDF.

1. What “production ready” means

The website is ready to launch only when every required item below is checked, the final build passes, and the live-domain tests succeed. A successful local build alone does not prove that email, DNS, HTTPS, maps or WhatsApp work publicly.

Current technical status: TypeScript passes, the Next.js static production export builds, all expected routes exist, internal links resolve, product images exist, and the Worker source passes JavaScript syntax validation.

Current launch status: not complete until the real domain, external accounts, verified business content and live tests are finished.

Public routes that must work

Page	Route	Primary purpose
Home	/	Business overview and primary conversion
Products	/products/	Small, medium and large sheet options
How to Use	/how-to-use/	Preparation steps and video
About	/about/	Business and quality information
Bulk Orders	/wholesale/	Wholesale enquiry form
Contact	/contact/	Contact form, map, details and FAQ
FAQ	/faq/	Direct FAQ link from footer/search
Legal	/privacy-policy/ , /terms/	Privacy and ordering terms

2. Master launch gate

- ☐ Real domain purchased and connected
- ☐ Business configuration and public contact details confirmed
- ☐ Metadata, sitemap and robots files use the real HTTPS domain
- ☐ Social links are real or hidden
- ☐ Products, pack sizes, storage and shelf-life information confirmed
- ☐ Statistics and testimonials are genuine and approved
- ☐ FAQ placeholder wording replaced with final answers
- ☐ Large images optimized and visually checked

- ☐ Email Worker and Resend connected and tested
- ☐ Privacy Policy and Terms approved for the business
- ☐ Production build and live-domain acceptance test passed
- ☐ Monitoring, backups and account recovery configured

3. Launch task 1 — domain and DNS

1. Purchase or confirm the final domain, for example `yourdomain.in`.
2. Connect it to the selected static host and follow the host's DNS instructions.
3. Enable HTTPS. The browser must show a valid certificate without warnings.
4. Redirect HTTP to HTTPS and decide whether the canonical address uses `www` or no `www`.
5. Set `NEXT_PUBLIC_SITE_URL` to the canonical HTTPS origin without a trailing slash.

```
NEXT_PUBLIC_SITE_URL="https://your-real-domain.in"
```

Acceptance criteria

- ☐ HTTPS homepage loads publicly
- ☐ HTTP redirects to HTTPS
- ☐ Only one canonical domain version is used
- ☐ No certificate errors

4. Launch task 2 — business configuration

Create `.env.local` from `.env.example`. Confirm every value with the business owner.

```
NEXT_PUBLIC_BUSINESS_NAME="FINAL LEGAL OR TRADING NAME"
NEXT_PUBLIC_PHONE_DISPLAY="+91 90803 33944"
NEXT_PUBLIC_PHONE="+919080333944"
NEXT_PUBLIC_WHATSAPP_DISPLAY="+91 90803 33944"
NEXT_PUBLIC_WHATSAPP="919080333944"
NEXT_PUBLIC_EMAIL="thechennaisamosa@gmail.com"
NEXT_PUBLIC_ADDRESS="No. 88, 7th Street, Azhagammal Nagar, Nerkundram, Chennai - 600107"
NEXT_PUBLIC_HOURS="CONFIRMED OPENING HOURS"
NEXT_PUBLIC_SITE_URL="https://your-real-domain.in"
```

Important: do not commit `.env.local`. The repository already ignores `.env*` except the safe example file.

5. Launch task 3 — SEO, sitemap and robots

1. Replace every `https://example.com` entry in `app/sitemap.xml`.
2. Replace the sitemap and host URLs in `app/robots.txt`.

3. Confirm page titles and descriptions describe the real products and service area.
4. Build, then open `/sitemap.xml` and `/robots.txt` on the live site.
5. Add the domain to Google Search Console and submit `/sitemap.xml`.

Acceptance criteria

- ☐ No `example.com` remains in generated output
- ☐ Every public route is listed once
- ☐ Canonical tags use HTTPS
- ☐ Google can fetch the sitemap

6. Launch task 4 — social accounts

Set real Instagram, Facebook and YouTube URLs in `.env.local`. If an account does not exist, remove or hide its icon; never send visitors to a generic platform homepage.

```
NEXT_PUBLIC_INSTAGRAM="https://instagram.com/real-account"
NEXT_PUBLIC_FACEBOOK="https://facebook.com/real-page"
NEXT_PUBLIC_YOUTUBE="https://youtube.com/@real-channel"
```

- ☐ Every icon opens the correct business account
- ☐ Links open safely in a new tab
- ☐ Profile names and contact details match the website

7. Launch task 5 — product and food information

Verify the values in `data/products.ts` and the supplied packaging before publishing.

- ☐ 5×5 , 7×7 and 8×8 inch sizes are actually sold
- ☐ Every listed pack really contains 50 sheets
- ☐ Storage method is accurate
- ☐ Shelf life, thawing and refreezing guidance match the packaging
- ☐ Ingredients, allergen information and vegetarian markings are available where legally required
- ☐ Delivery area, minimum order and payment terms can be confirmed by staff
- ☐ Images reasonably represent the real supplied product

8. Launch task 6 — claims and testimonials

Review `components/About.tsx` and `components/Testimonials.tsx`. Publish only claims that can be supported.

- ☐ “5+ years experience” is true and documented
- ☐ “100+ business customers” is true and documented

- ☐ Each testimonial came from a real customer who allowed publication
- ☐ Star ratings accurately represent the customer's statement
- ☐ Unsupported claims are replaced or removed

Anonymous placeholder testimonials should not be presented as verified customer reviews.

9. Launch task 7 — FAQ completion

Edit `data/faqs.ts`. Remove internal drafting phrases such as “should be updated” and “update them based on your actual product range.”

- ☐ Storage answer matches packaging
- ☐ Shelf-life answer gives the confirmed duration or tells customers to check the pack
- ☐ Available sizes are final
- ☐ Delivery answer reflects the actual service area
- ☐ Bulk-order and WhatsApp answers are accurate

10. Launch task 8 — image optimization

The three product-card WebP images are already compact. The hero and production images are currently about 2 MB each and should be converted to WebP or AVIF.

- ☐ Hero image ideally below 300–500 KB
- ☐ Production image ideally below 300–500 KB
- ☐ No visible quality loss on desktop
- ☐ Images remain sharp on mobile
- ☐ Alternative text still matches the final image
- ☐ No logo, watermark or misleading packaging appears

11. Automatic email + WhatsApp setup

The budget-friendly design uses a Cloudflare Worker and Resend. The website emails the enquiry to `samosasheet@gmail.com`, then opens WhatsApp with the same prepared message for the customer to approve and send.

What you need

- Cloudflare account
- Resend account
- Verified sending domain
- Public website domain
- Access to DNS records

Resend

1. Add the real domain in Resend.
2. Add the DNS records Resend provides.
3. Wait until verification succeeds.
4. Create a restricted API key.
5. Choose a sender such as `enquiries@your-real-domain.in`.

Worker configuration

Edit `worker/wrangler.toml`:

```
ALLOWED_ORIGIN = "https://your-real-domain.in"
FROM_EMAIL = "Samosa Sheet Website <enquiries@your-real-domain.in>"
TO_EMAIL = "samosasheet@gmail.com"
```

Store and deploy from the project:

```
cd /home/dell/SS/samosa-sheet-website/worker
npx wrangler login
npx wrangler secret put RESEND_API_KEY
npx wrangler deploy
```

Never place the Resend API key in `.env.local` under a `NEXT_PUBLIC_` name, source code, Git, screenshots or chat.

Connect the website

```
NEXT_PUBLIC_ENQUIRY_API_URL="https://samosa-sheet-enquiries.YOUR-SUBDOMAIN.workers.dev/"
```

Rebuild the website after setting this variable. Without it, the interface intentionally remains in WhatsApp-only mode.

Form acceptance tests

Flow	Email must contain	WhatsApp must contain
Product order	Product, size, pack size, quantity, phone, address	The same order details
Bulk enquiry	Business, location, product, quantity, frequency	The same wholesale details
Contact enquiry	Name, phone, email, type, message	The same enquiry details

- ☐ Email reaches Inbox
- ☐ Spam folder checked
- ☐ Reply handling tested
- ☐ Invalid input rejected
- ☐ Wrong website origin rejected by Worker
- ☐ Failure message appears if the email API is unavailable

12. Legal and privacy review

- ☐ Privacy Policy names the correct business
- ☐ It explains collection through email, WhatsApp and forms
- ☐ Terms describe order confirmation, payment, delivery, damage and returns accurately
- ☐ No online-payment promise appears unless payments are implemented
- ☐ Food labeling and local compliance obligations have been checked
- ☐ Policies reviewed by a qualified local adviser where necessary

13. Build and deployment procedure

From the project directory:

```
cd /home/dell/SS/samosa-sheet-website
npm ci
npm run lint
npm run build
```

A successful build must list all 13 static routes and create `out/index.html`. For the included local service manager:

```
./manage-service.sh deploy
./manage-service.sh status
```

For static hosting, deploy the complete `out/` directory. Do not upload source secrets.

14. Final live-domain test

Desktop and mobile

- ☐ Header and mobile menu work
- ☐ Every navigation route opens
- ☐ Footer links work
- ☐ No horizontal scrolling
- ☐ Text remains readable at 200% zoom
- ☐ Keyboard focus is visible
- ☐ FAQ controls expand and collapse

Contact and conversion

- ☐ Call link uses +919080333944
- ☐ Email link uses the intended public address
- ☐ Map opens the correct building/location
- ☐ Product order tested
- ☐ Bulk form tested
- ☐ Contact form tested
- ☐ WhatsApp destination number confirmed
- ☐ Email notification arrives at samosasheet@gmail.com

Search and quality

- ☐ Page titles are unique
- ☐ Canonical URLs use the live domain
- ☐ Sitemap and robots return HTTP 200
- ☐ No placeholder domain/social links remain
- ☐ Browser console has no errors
- ☐ Chrome Lighthouse checked for Performance, Accessibility, Best Practices and SEO
- ☐ Chrome, Android and iPhone/Safari checked where available

15. Monitoring, backup and maintenance

- ☐ Cloudflare and Resend two-factor authentication enabled
- ☐ Recovery codes stored securely
- ☐ Worker errors checked after launch
- ☐ Resend delivery/bounce logs reviewed

- ☐ Uptime monitor checks the homepage
- ☐ Source backed up in a private Git repository
- ☐ Environment values backed up in a password manager
- ☐ Monthly contact/form test scheduled
- ☐ Dependencies and security updates reviewed regularly

Suggested maintenance schedule

Frequency	Action
Monthly	Submit all forms, check links, confirm contact hours and review delivery logs
Quarterly	Review products, photos, claims, testimonials, FAQ and legal wording
Before every release	Run TypeScript, production build and live smoke tests
Yearly	Renew domain and verify account recovery access

16. Final sign-off

Do not approve launch until every required checkbox in this document is complete.

Approval	Name	Date	Signature
Business details and claims verified			
Products and food information verified			
Email and WhatsApp tested			
Legal pages reviewed			
Final production deployment approved			

Launch decision: ☐ Approved ☐ Not approved — remaining items documented
